

## CTGH Session 6 — HIV TB review

---

Slide	Presentation Notes
1	This brief lecture is intended to tee up our case-based discussion of the Partners In Health approach to management of ambulatory HIV patients with possible TB (Dr. Patrick Lee helped write the PIH guidelines for this)
2	Objectives for this session (including the case-based discussion to follow) include:
3	Narrate slide.
4	When should we suspect TB? Who should we apply the Partners In Health algorithm to?
5	What do we mean when we say “integrated treatment”? Note the comprehensive wraparound services provided here.
6	Given high prevalence of side effects (>50%) to multiple meds in HIV patients, what is a pragmatic approach to sequencing anti-TB, pneumocystis prophylaxis, and antiretroviral therapy initiation?
7	Show recommended treatment regimens for different categories of TB patients.
8	How does MDR-TB treatment differ? Keep it basic for pre-clinical audience.
9	What were first-line ART regimens in Rwanda at the time of writing (2011)?
10	A word on cotrimoxazole prophylaxis.
11	Role of community health worker accompaniment.
12	Focusing down to 5 key patient education messages:
13	A word on TB infection control
14	A brief word on extrapulmonary TB (keep it simple for a pre-clinical audience).
